

How safe is your safe?

With rural crime rates on the rise in the current recession it is more important than ever to safeguard your valuable possessions.

Makers of fine cash safes SMP Security, warn that although this may seem a relatively easy problem to solve, through a traditional safe, not all safes meet the required European standards and in extreme circumstances may not be covered in a insurance claim. This will lead to not only the loss of the safe, but the ability to claim for the valuables inside.

With over 35 years experience SMP Security are more than aware of these issues. All of their safes comply to European standards BS EN 1183, BS EN 1143 and BS EN 14450 giving the consumer peace of mind that an SMP safe will not only withstand vigorous tampering in the unfortunate event of a burglary, it will also conform to regulations in the event of a claim. Any safe that is not tested to European standards should be avoided.

Each safe comes with a 2 year guarantee and is suitable for domestic or commercial use covering cash from £4000 (40,000 jewellery) to £100,000 (£1 million jewellery). A range of sizes are available with adjustable steel shelving, various locking options and floor anchor kits if required.

Based in Halesfield, Telford, Managing Director Paul Skitt states "Installing a safe is becoming far more prevalent in the current climate. We ensure all of our safes meet the required criteria for the user and the European standards commission"

If you are concerned about the recent crime wave and feel your home or business is at risk from burglary, SMP have a safe to meet your demands. For more information please contact 01952 585673 or email sales@smpsecurity.co.uk
